

Project Design Phase Problem – Solution Fit

Date	06 July 2026
Team ID	
Project Name	Optimizing User, Group, and Role Management with Access Control and Workflows
Maximum Marks	2 Marks

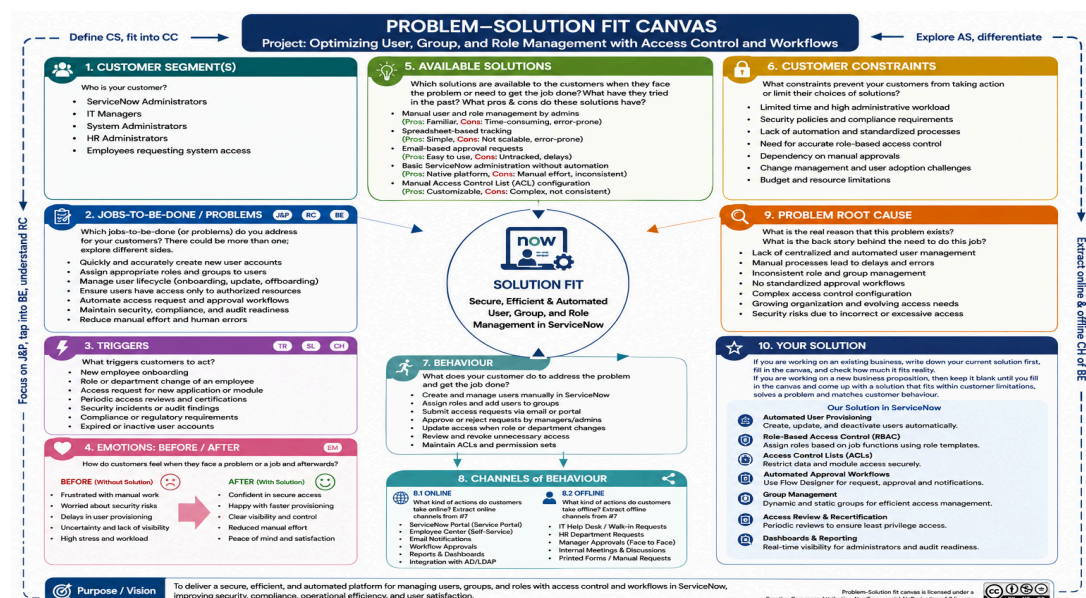

Problem – Solution Fit :

The Problem–Solution Fit for this project focuses on identifying the challenges organizations face in managing users, groups, roles, and access permissions within ServiceNow. The proposed solution addresses these challenges by implementing automated workflows, role-based access control (RBAC), and Access Control Lists (ACLs) to ensure secure, efficient, and standardized user access management. This approach helps administrators reduce manual effort, improve security, and streamline access provisioning while ensuring compliance with organizational policies.

Purpose:

- ☐ Develop a secure and automated solution for managing users, groups, roles, and access permissions in ServiceNow.
- ☐ Reduce manual administrative effort by automating user provisioning, approval workflows, and role assignments.
- ☐ Strengthen organizational security through Role-Based Access Control (RBAC) and Access Control Lists (ACLs).
