

Project Design Phase Solution Architecture

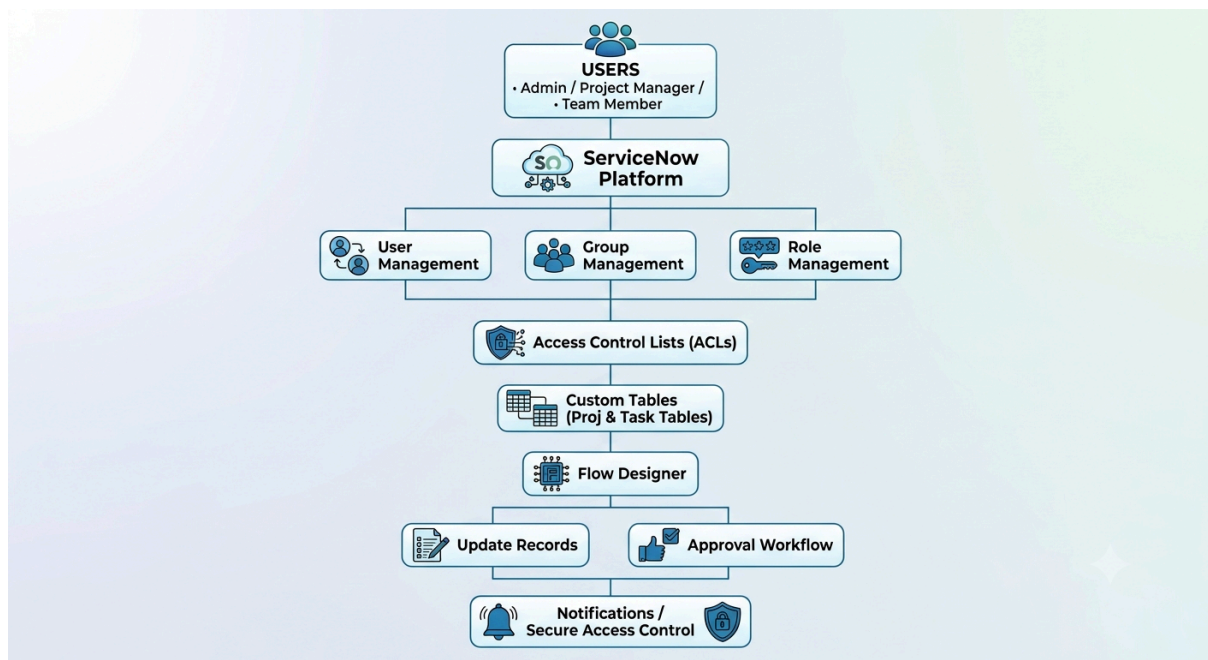

Date	04 July 2026
Team ID	
Project Name	Optimizing User, Group, and Role Management with Access Control and Workflows
Maximum Marks	4 Marks

Solution Architecture:

The solution architecture for **Optimizing User, Group, and Role Management with Access Control and Workflows** defines how ServiceNow components interact to provide a secure, scalable, and automated access management system. The architecture integrates user management, group management, role-based access control (RBAC), Access Control Lists (ACLs), custom tables, and workflow automation using Flow Designer. It ensures secure user provisioning, controlled access to organizational resources, automated approval workflows, and centralized administration while improving governance, operational efficiency, and compliance with organizational security policies.

- Design a secure architecture for managing users, groups, and roles within ServiceNow.
- Implement Role-Based Access Control (RBAC) and Access Control Lists (ACLs) to protect organizational data.
