

Project Design Phase
Proposed Solution

Date	04 July 2026
Team ID	
Project Name	Optimizing User, Group, and Role Management with Access Control and Workflows
Maximum Marks	2 Marks

Proposed Solution :

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Organizations often face challenges in managing users, groups, and roles manually, resulting in inconsistent access permissions, security risks, administrative overhead, and delayed user provisioning. Lack of automation in approval workflows can lead to unauthorized access, compliance issues, and reduced operational efficiency.
2.	Idea / Solution description	Develop a ServiceNow-based solution that automates user, group, and role management using Role-Based Access Control (RBAC), Access Control Lists (ACLs), and Flow Designer workflows. The solution streamlines user provisioning, approval processes, role assignment, and access management while ensuring security, consistency, and compliance.
3.	Novelty / Uniqueness	The solution combines automated workflows, RBAC, ACLs, and centralized user management within ServiceNow. It minimizes manual intervention, provides secure access control, automates approvals, and ensures consistent permission management across the organization, making the process faster and more reliable.
4.	Social Impact / Customer Satisfaction	The solution improves organizational security, reduces human errors, speeds up access requests, enhances user experience, increases administrator productivity, and ensures that employees receive the correct access at the right time. It also supports compliance with organizational security policies.
5.	Business Model (Revenue Model)	The solution can be implemented as a ServiceNow enterprise application for organizations requiring secure identity and access management. Revenue can be generated through implementation services, customization, consulting, training, support, maintenance contracts, and workflow optimization services.
6.	Scalability of the Solution	The solution is highly scalable and can support organizations of any size. New users, departments, groups, roles, approval workflows, and security policies can be added without significant modifications. It can also be extended with additional ServiceNow modules and enterprise integrations as organizational requirements grow.
